## CUSTOMER

Founded in 1932, Butlers Chocolates is an Irish owned manufacturer that products a wide range of luxury chocolate products, including chocolate assortments, truffles, fudge, toffee, chocolate bars and seasonal novelties. The company has also created a chain of Butlers Chocolate Cafes.

## WHY DID THEY CHOOSE ESET?

“In the past we used scanners that used up a lot of computer resources, which caused much irritation for our users. Therefore we started looking for a better, faster product and after testing several, we switched to ESET Endpoint Antivirus. After the demo trial, which we tried on a few of our most complaining users, we were more than happy to deploy it on the rest of our machines,” says Marcin Januszewski of Butlers Chocolates.

He adds: “ESET is fast, reliable and working very well even on our old machines. Deployment and managing is very easy with the console. And of course, since the initial installation, we didn’t have any major issues with viruses and other malware on our computers. I would recommend ESET products to all who need a fast and reliable antivirus solution”

## ABOUT ESET ENDPOINT ANTIVIRUS

ESET Endpoint Antivirus protects computer users from all types of malware, including viruses, spyware, rootkits and phishing. Built for speed and low system demands, the solution is based on our record-holding scanning engine, the winner of the most Virus Bulletin “VB100” awards of all antivirus makers.

In the SMB and corporate environment, the solution can be easily managed by ESET Remote Administration that gives network administrators strong tools designed to provide central visibility and real-time insights in the network security.

## BENEFITS FOR BUTLERS CHOCOLATES

- Comprehensive, easy-to-use remote installation and management
- Seamlessly works on 10+ years old Windows machines the company is still using
- Time saved by not having to respond to issues with running an antivirus anymore
- Powerful protection of sensitive data against computer threats
- Comprehensive licensing - no need for individual licensing for Windows, Linux, and Mac computers
