Kürt, Hungary

"I find the reliability and speed of the solutions used to be exemplary, and the software is suitable for use in a large company environment. It works unnoticeably in the background and does not slow the performance of the systems."

László Harami, System Integration Specialist, Kürt

THE CUSTOMER

Established in 1989, Kürt has been recovering data for nearly 20 years, and successfully performs around 2,500 data-saving and -recovery tasks every year. Kürt's first foreign subsidiary opened in Germany at the beginning of 2003, and in Austria a year later. Since 2007, Kürt has expanded into the Middle East, establishing a subsidiary in Dubai, and started operations in the USA.

LOOKING FOR RELIABLE PROTECTION

At Kürt, information security plays a central role — no one knows better than the company's employees how important data protection is. *"I had used ESET's products for years on my computers at home, so I had a lot of experience with them. We also looked at the results of international tests, and when we chose it we knew that, according to objective comparisons, ESET's software was among the most reliable available,"* points out László Harami, Kürt's system integration specialist.

THE SOLUTION

After testing, the company extended the use of ESET Endpoint Security software to all of the company's workstations — approximately 200 desktop and 80 mobile devices. It also employs ESET Gateway Security to filter the company's HTTP traffic, examining 5-6 GB of data every day and serving as a pre-filter, ensuring that no malicious code gets onto users' computers while browsing.

"Reliable client protection is an important supplement to server protection which should not be forgotten," notes Harami. *"The ESET Smart Security firewall ensures that the mobile workstations used by staff are also protected against unauthorised access in networks outside of the workplace. Based on the feedback we have received, we have chosen well — users like the speed of the ESET solution and are satisfied with how it can be used."*

Harami especially highlights the functionality of ESET Remote Administrator: *"I can't think of any functions that are missing. You can install and uninstall, create any number of installation packages, import and export settings, and extract the desired information from the log files."* In addition, he praises the benefits of using ESET solutions in his operation:

KEY BENEFITS FOR KÜRT

- **High scanning speed**
- **Gateway server protection**
- **Portable /desktop protection**
- **Reliable client protection**
- **Centralized system monitoring**

"I find the reliability and speed of the solutions used to be exemplary, and the software is suitable for use in a large company environment. It works unnoticeably in the background and does not slow the performance of the systems. In the future, we are planning to use ESET's products for exchange and file server protection as well."
