Products:

ESET Endpoint Security and ESET File Security

THE PARTNER

Vandernet Technology Services is a managed service provider that became an ESET partner in 2016. The company offers security, network management, backup solutions and wireless networking to the Missouri region.

WHY THEY CHOSE ESET

When choosing a security provider, Vandernet Technology Services looked for product performance, service and flexibility. “ESET is the best security solution that I have ever had the pleasure of using. To top that, their support and service department is top notch. Any time I have had a problem, they are always willing to help and answer their phones,” says Richard Baum, network engineer.

Vandernet Technology Services benefits from ESET’s flexible monthly MSP model and superior performance. “We have many customers that need antivirus solutions and we are able to provide these through the ESET MSP program. It saves us time and labor because it JUST WORKS!” Since switching to ESET, Vandernet has seen a significant savings in time and labor hours particularly in servicing infected devices.

In addition to rolling out ESET to their customer base, Vandernet Technology Services deployed ESET endpoint security solutions to their own environment. “We use ESET to protect our technicians when going into a volatile environment. We know we can connect with confidence!”
